AI and Research Writing: A Discussion with CSU Researchers

OCT 31, 12-1:30, LSC 308-310

Register here: csuwrites.colostate.edu/guest-speakers/

Predictive generative and corrective writing tools (think Grammarly) have been used by research writers for more than a decade. Recent developments in probabilistic text generation (think ChatGPT) have brought large language models (LLM) to the forefront of our conversations about how we write and how we engage and assess knowledge production. This CSU Writes hosted discussion session provides a space for CSU to consider how our researchers and scholars are understanding, skill-building, and navigating text generative software.
